Back Harness Supports (i.e. something suitable to hang a Back Harness on)

With regard to back harness supports, my advice is to have back harness supports at each shearing stand.

These supports need to:

- Support the weight of a heavy shearer
- Have the fixing point reachable while standing on the shearing board
- Not to be able to come into contact with electricity (including through wear and tear) either directly or indirectly
- Allow the shearer to move freely while shearing and releasing the sheep

Regards

Michael Lawrance
